

Bodies connection:

by means of couplers: hydraulic / air system

Hydraulic:

hydraulic cylinder HYVA / PENTA

Description of swap bodies carrier:

Exchange system offered by the company VS-mont, enables the exchange of various types of swap bodies (container, tipping body, platform body, hook stringer, cistern tanks, gritting body, sprinkler body etc.) on the truck chassis in the time period from cca 5 up to 10 minutes. Mechanism of swap bodies lifting and mechanism of swap bodies securing is provided by means of hydraulic pistons in horizontal and vertical direction.

Advantages of swap bodies carrier:

- the system is designed to increase the building height only + 6 mm on the chassis frame
- fast exchange of bodies cca 5-10 min (1 person)
- exchange of bodies is possible with the load up to the total weight of 11 tons
- possibility of using more types of bodies on one truck

Accessories calculated in the price of swap bodies carrier:

- plastic toolbox
- mudguards over two axles, mudflaps
- positional vehicle lighting
- side barriers
- protective grids on rear group lights
- fitting of the tipping body on to the chassis in the VS-mont factory

Accessories for extra charge:

- adjustment of the original body delivered from the customer (including 4 units parking legs)
- cardan coupler for mixer - 330.10
- spare wheel holder behind the cab - mechanic (fixed to the chassis frame)
- tarpaulin cover system
- aluminium mudguards
